

LaMCoS

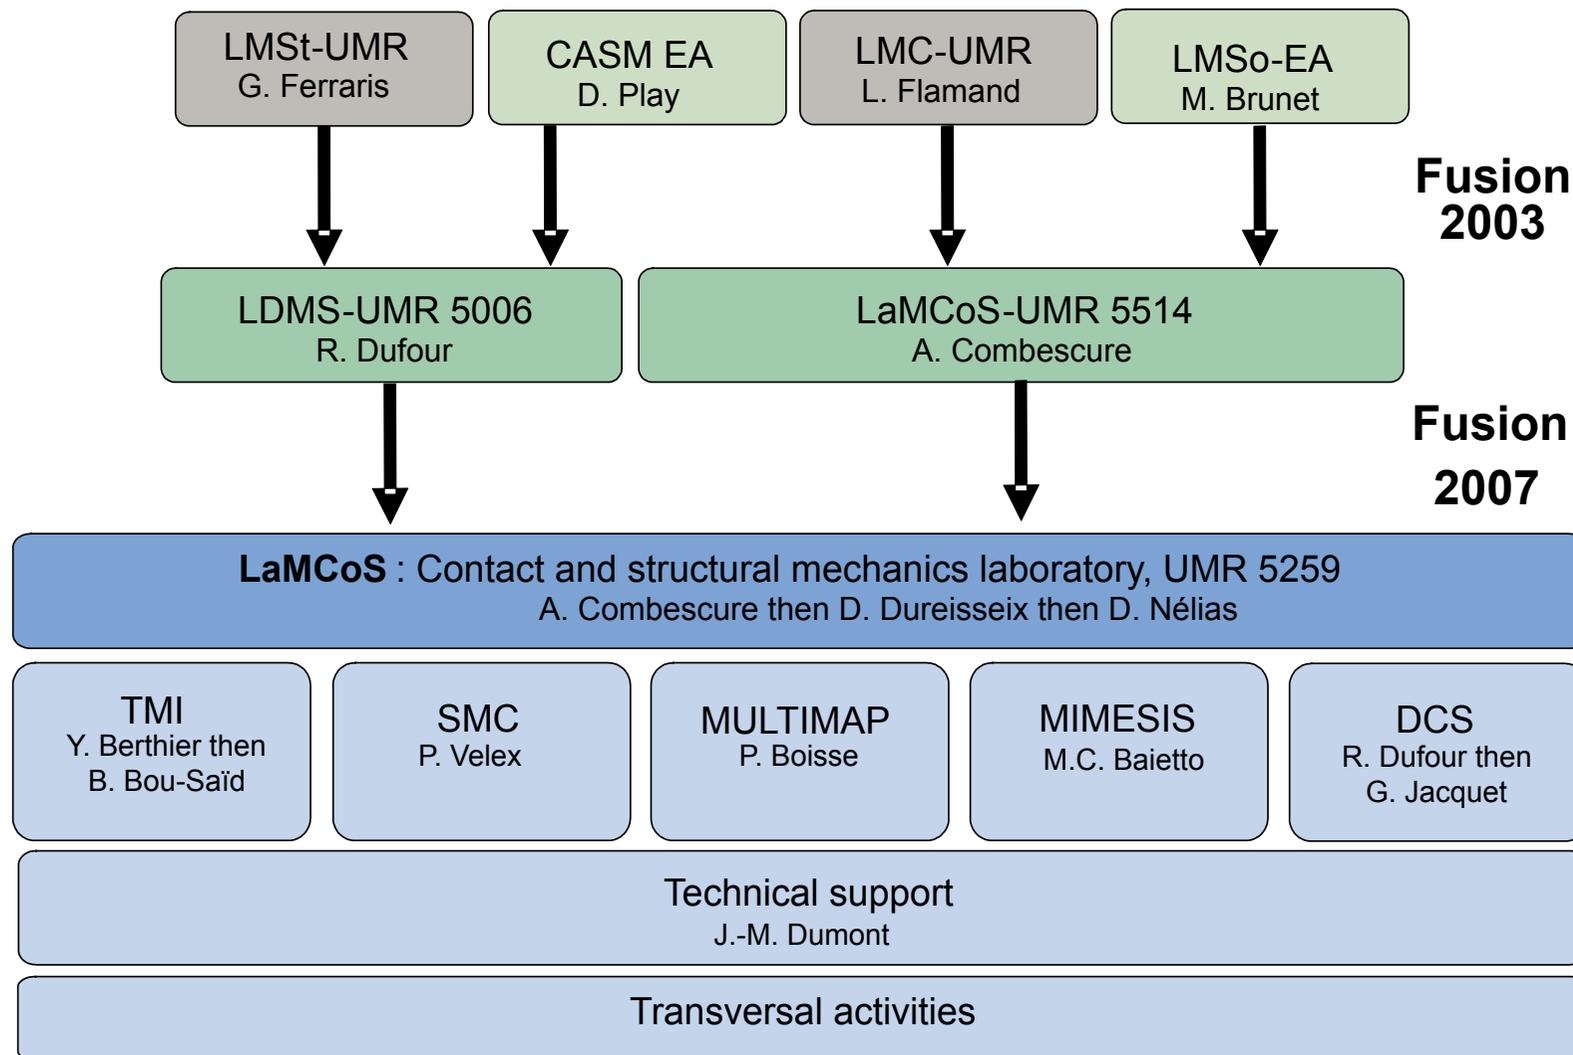

Contact and Structural Mechanics Laboratory

UMR CNRS5259 / INSA Lyon
27 bis avenue Jean Capelle
Bâtiment Sophie Germain
69 621 Villeurbanne, France
lamcos@insa-lyon.fr
<http://lamcos.insa-lyon.fr>

■ General presentation of LaMCoS - where

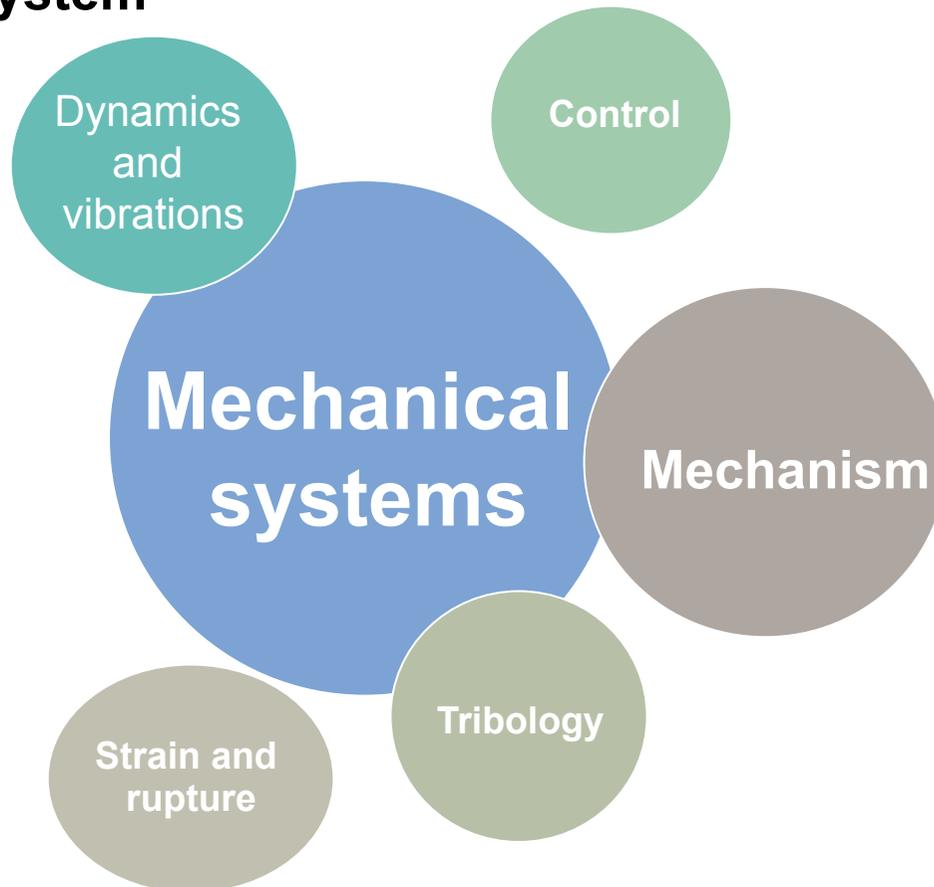

■ General presentation of LaMCoS – history

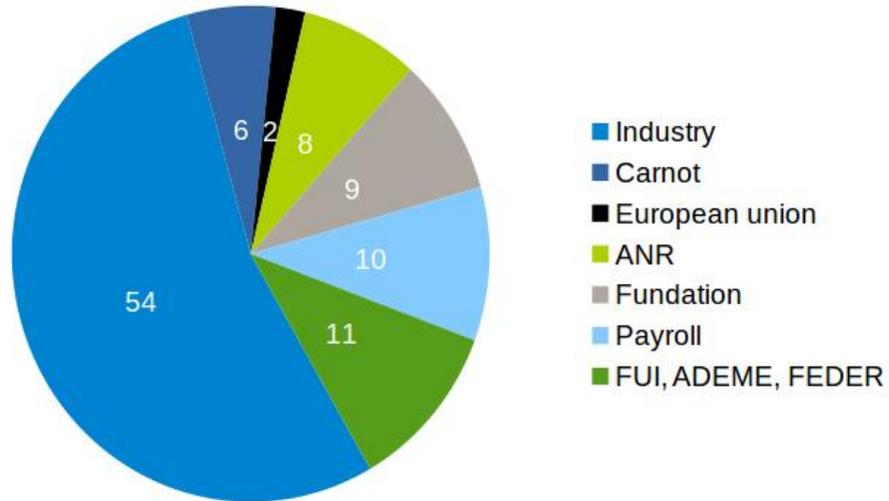

■ General presentation of LaMCoS – domains of expertise

Predict and control the performance and integrity of static and dynamic mechanical systems from the component to the whole system

- Predict the performance and integrity of mechanical systems (living and industrial systems)
- Systematically confront experiments and numerical simulations or quasi-analytic models (pluridisciplinary teams, cutting-edge measurement techniques)
- Making relevant research topics arise from industrial barriers

■ General presentation of LaMCoS – facts and figures

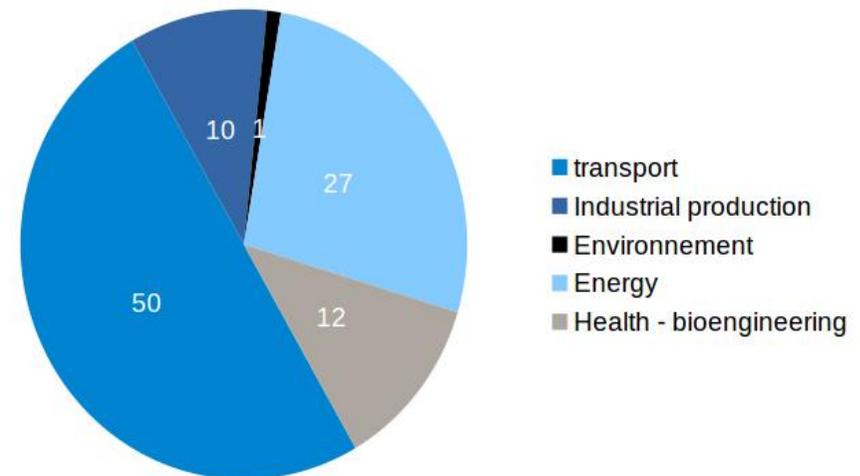

200 people; 3 papers/person/year
4.2M€ de CA*

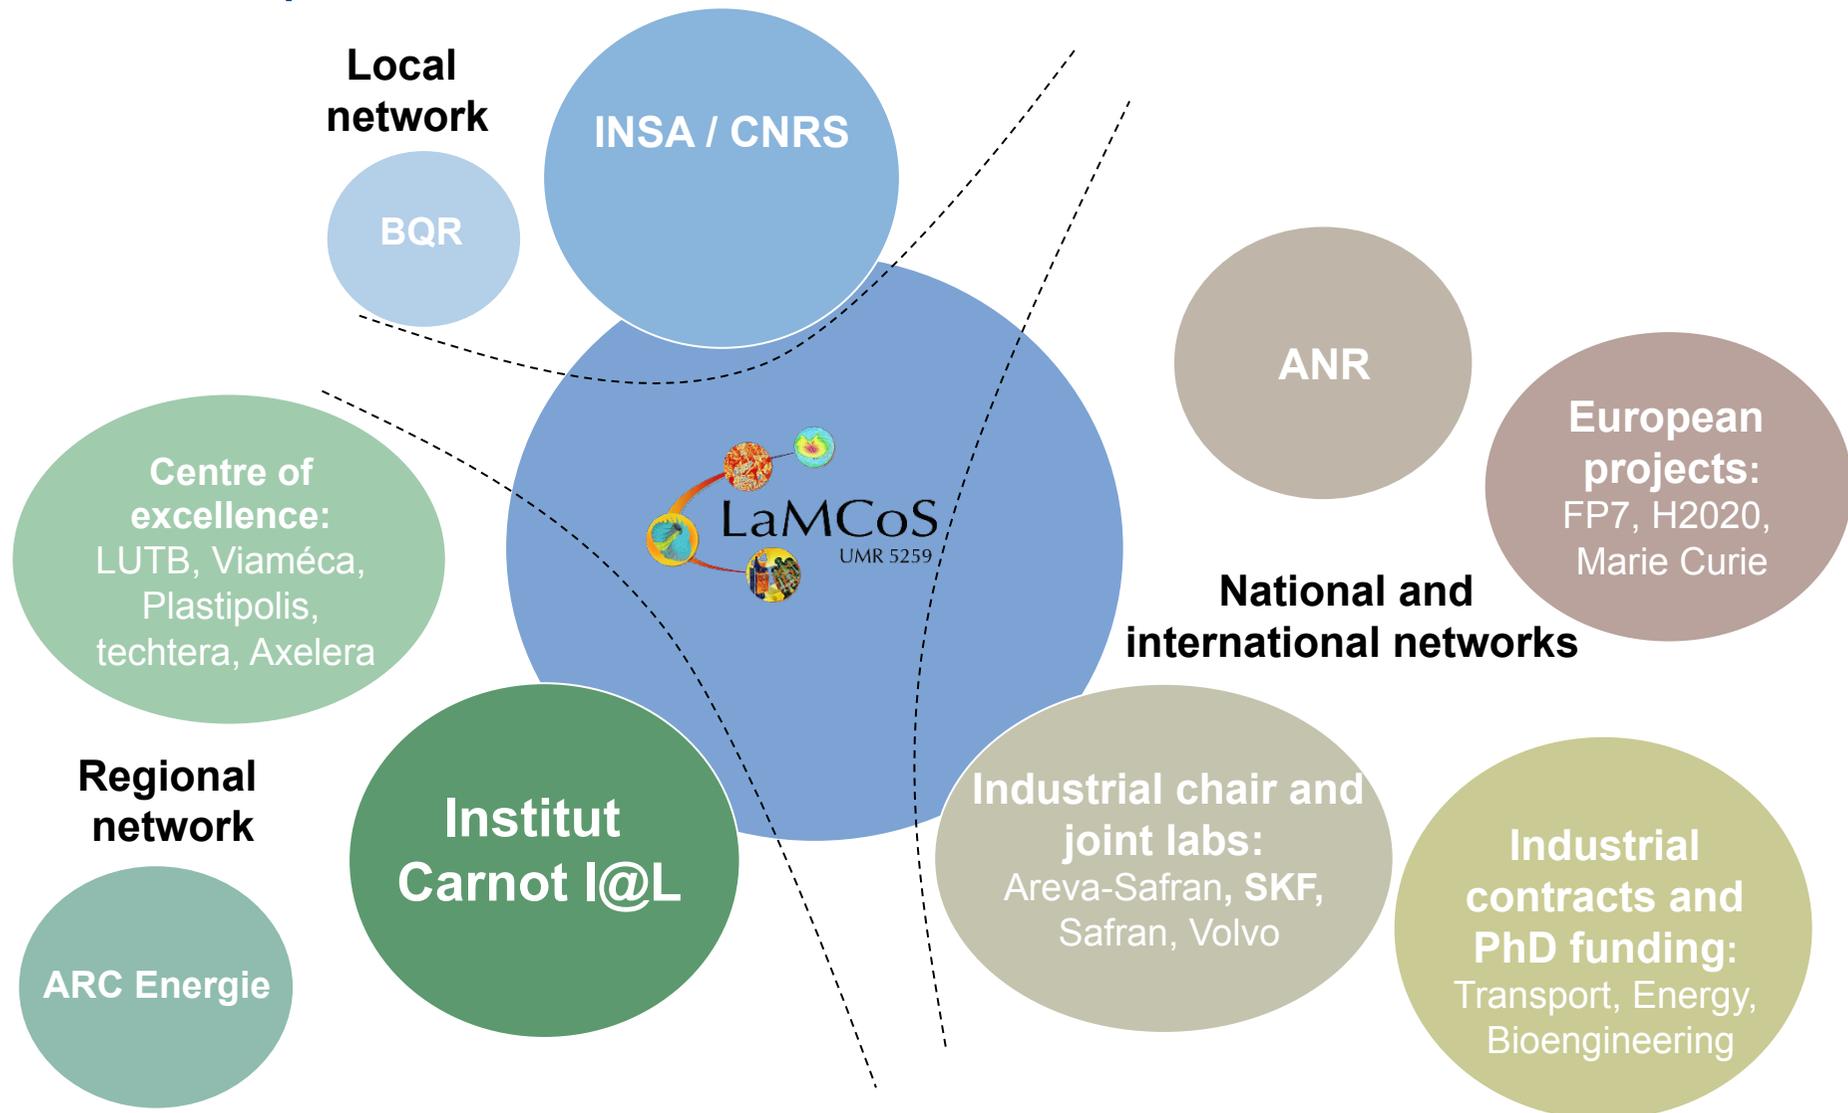

53 teachers-researchers ; 21 technicians
104 post-graduate students ; 16 Post-docs**

* Average 2011-2015

** Data at 30 June 2014

■ General presentation of LaMCoS – research network

■ Research units

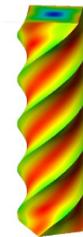

- DCS : Dynamics and Control of Structures, G.Jacquet-Richardet

Prediction and control of the dynamic behavior of machines and structures

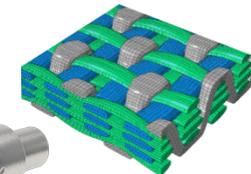

- MIMESIS: Multiscale Mechanics for Solids, M.C. Baietto

Heterogeneous media damage and failure, non-linearities, change of scale, tangled media

- MULTIMAP: Multiphysics Mechanics for materials and processes, P. Boisse

Numerical simulation of processes for composite, polymers and metallic materials, multiphase materials, dynamic behaviour of materials

- SMC: Mechanical Systems and Contacts, P. Velex

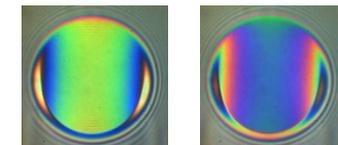

Quasi-static and dynamic functional analysis of lubricated systems

- TMI: Tribology and Interface Mechanics, B. Bou-Saïd

Understanding of the tribological behaviour of the contact interface.

Predictive friction, wear and fluid or solid lubrication models

- DCS : Dynamics and Control of Structures, G.Jacquet-Richardet
Prediction and control of the dynamic behavior of machines and structures

■ DCS Team: research topic

Societal issues

UNDERSTAND and
MASTER

OPTIMISE
performances

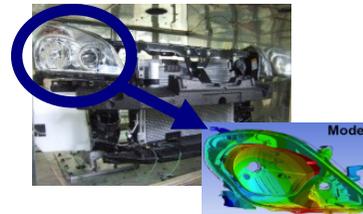

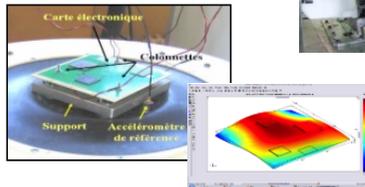

REDUCE nuisances,
limit risks

MONITOR, ACT,
CONTROL

MAKE it energetically
autonomous (smart
structures)

Dynamics of Structures and Machines

Scientific issues

MASTER non-linear behavior,
uncertain environments and
evolutive behaviors

MIX numeric and experimental
apaches

INCORPORATE multi-physical
and multi-scale modeling of
phenoma

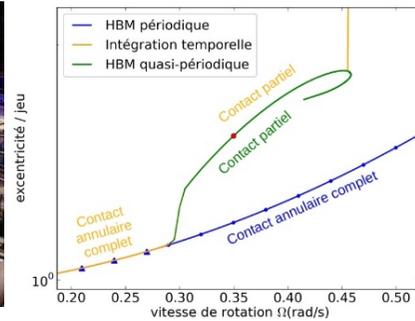

DESIGN smart materials and
smart structures

DEVELOP numerical
dedicated method

■ Equipe DCS – Some achievements

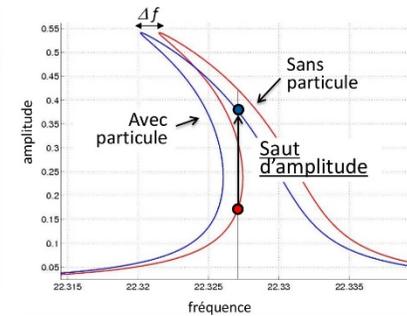

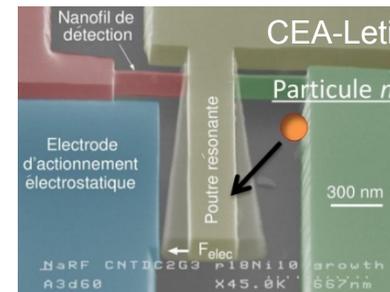

Rotating Dynamic – Rotor/Stator contact

ANR IRINA (EDF) - Collaboration Turbomeca

Non-linear Dynamic - MEMS/NEMS Sensors

Collaboration CEA-Leti / LTDS – 2 patents

Equipex PHARE

Embedded rotor

Characteristics : 62000N, 10g max, +/- 50mm, 5° rotation.

Vibration Control of new class of helicopter

Collaboration Airbus Helicopter

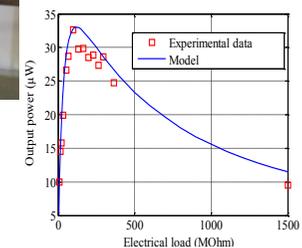

Soft hybrid Generator – Energy Scavenging

ANR SEASEA (SBM Offshore), Collaboration G2Elab, IMP, MSSMAT

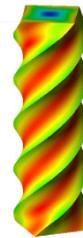

Strain of 50%
at 1Hz

0,55mJ.g⁻¹

MIMESIS : Multiscale Mechanics for Solids, M.C. Baietto

Heterogeneous media damage and failure, non-linearities, change of scale, tangled media

■ MIMESIS: research topics

Scales :

Macro :
*structure
part*

Meso :
sample

Micro

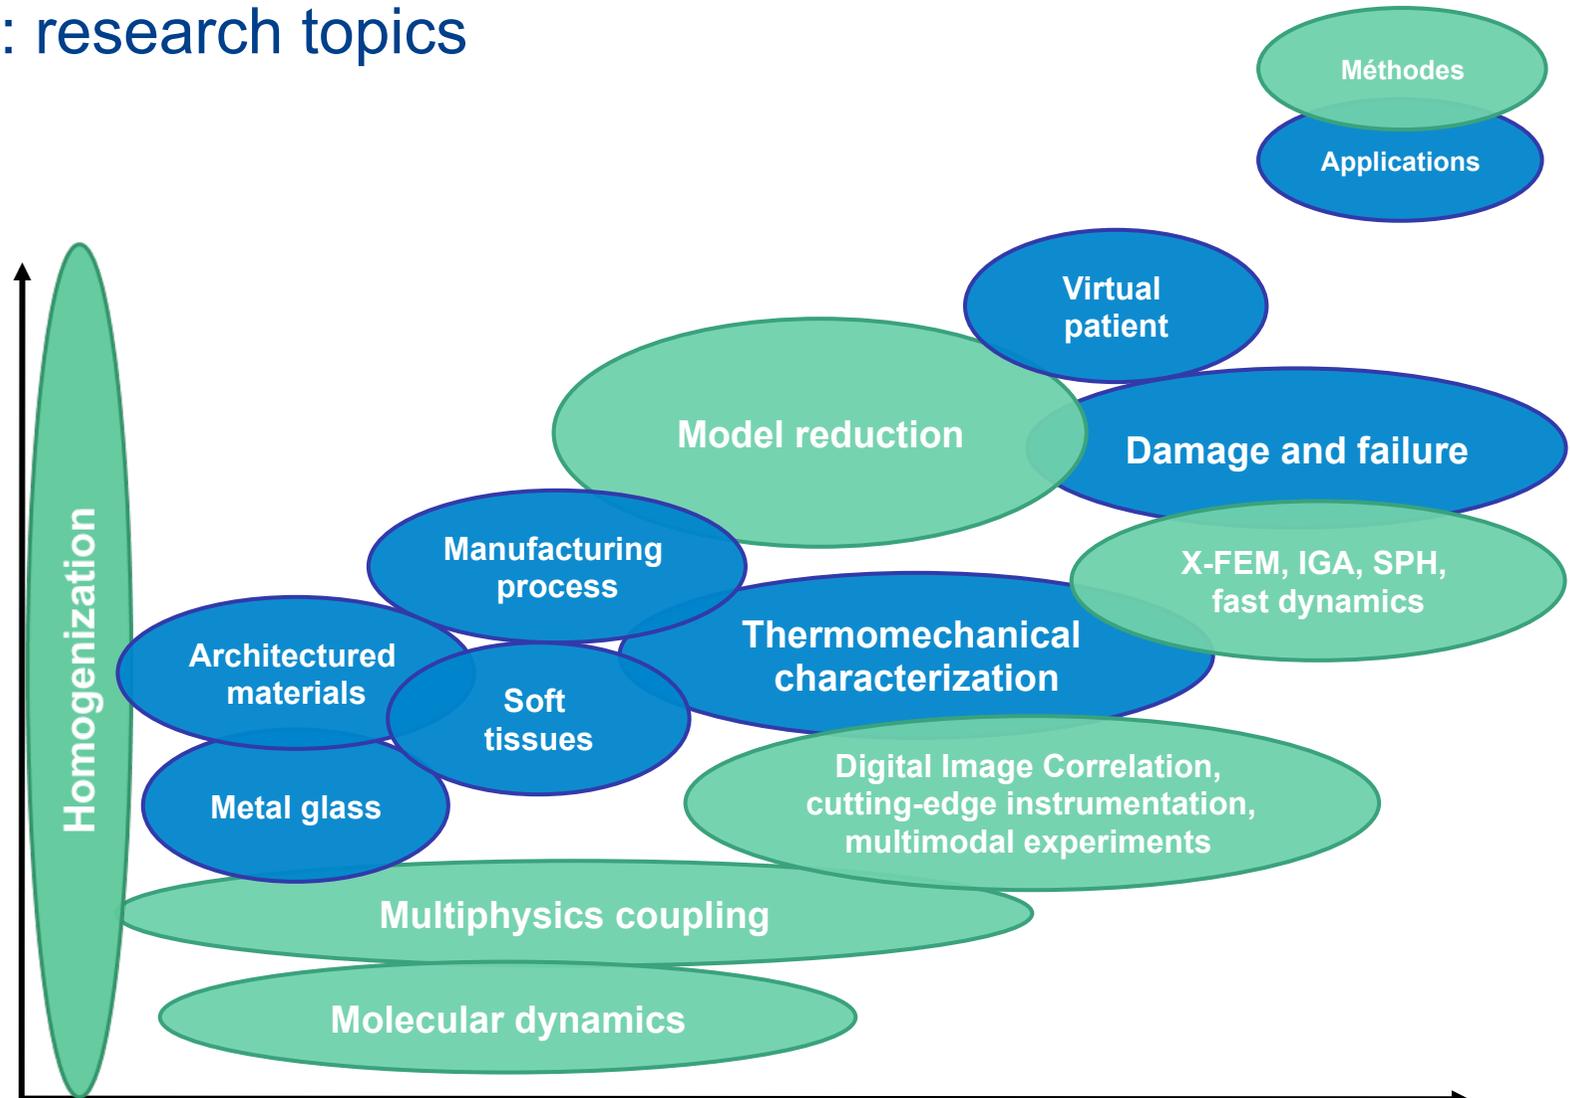

Nano

Life cycle :

from production...

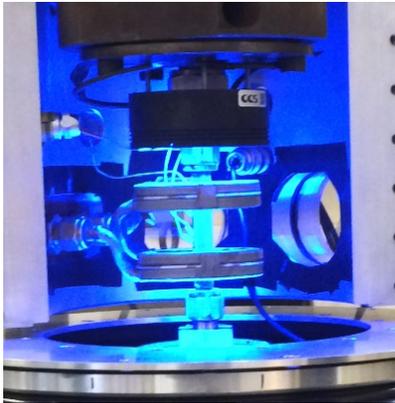

... to service...

... to ruin

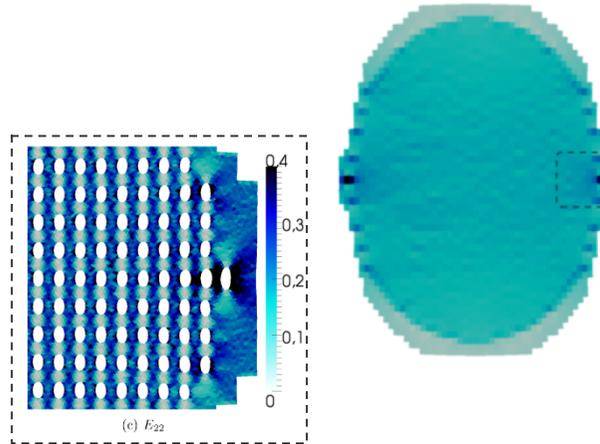

MIMESIS: some achievements

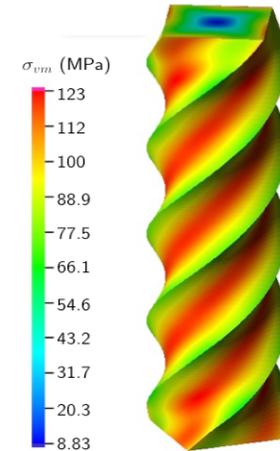

Multimodal experiments
Sheath rupture under pressure

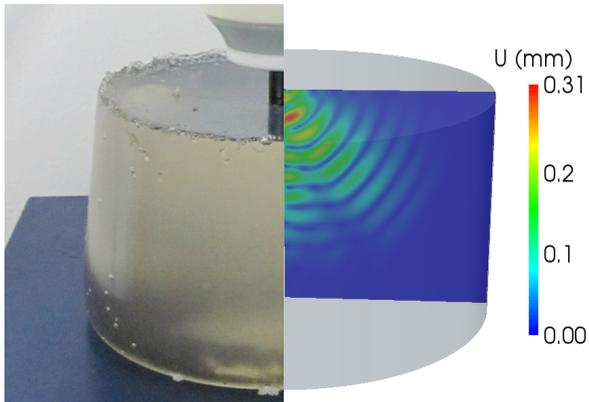

Scale transition in large
strain and rupture

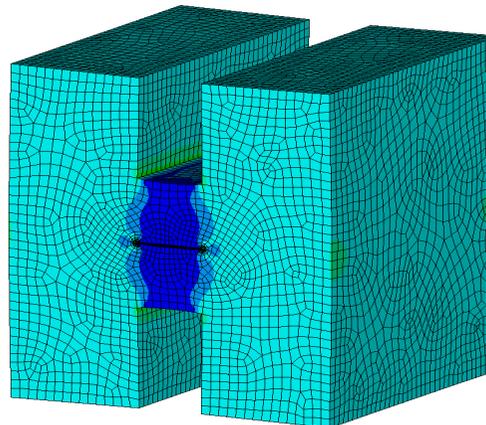

Isogeometric analysis

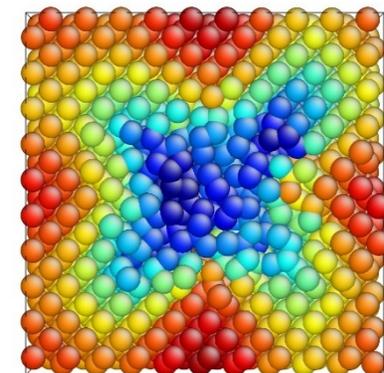

Numerical methods for soft tissues
characterization

Propagation of 3D cracks using
reduced-order modeling

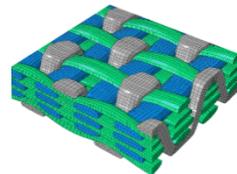

Molecular dynamics
Amorph material with an inclusion

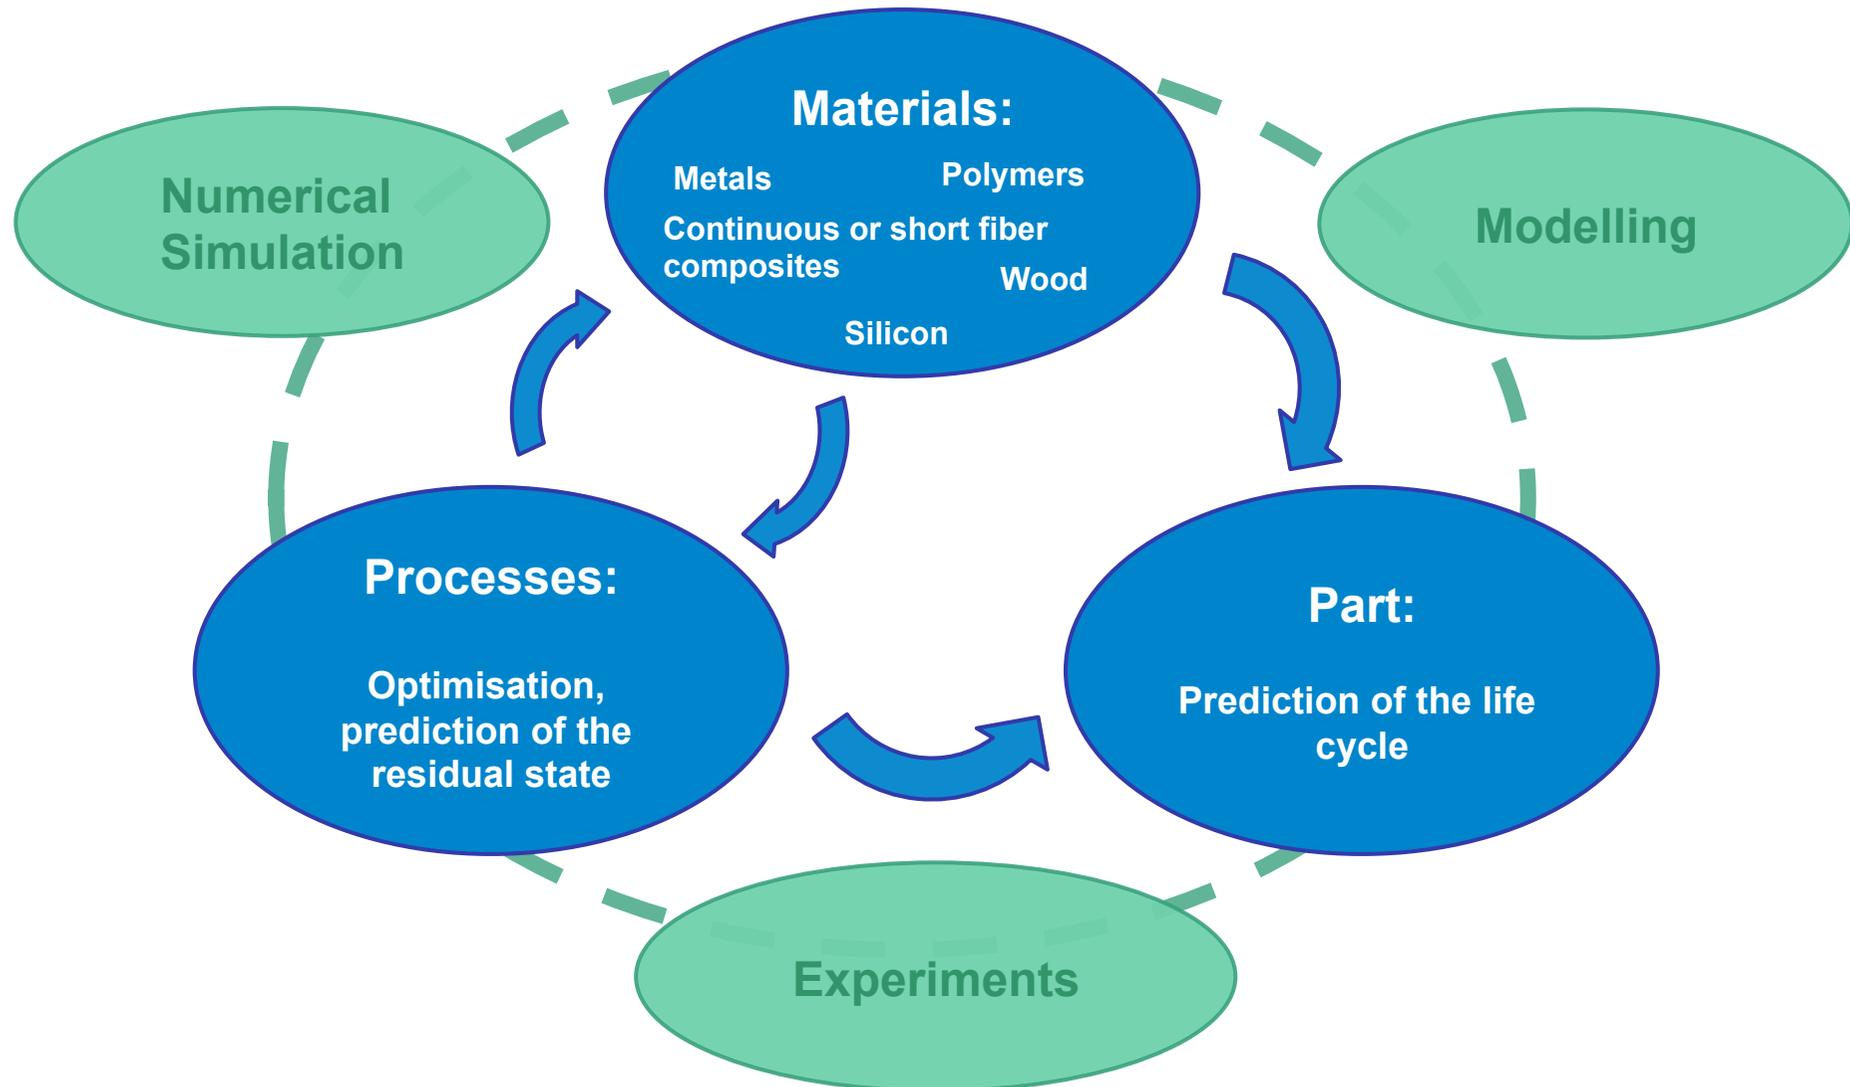

MULTIMAP : Multiphysics Mechanics for materials and processes, P. Boisse

Numerical simulation of processes for composite, polymers and metallic materials, multiphase materials, dynamic behaviour of materials

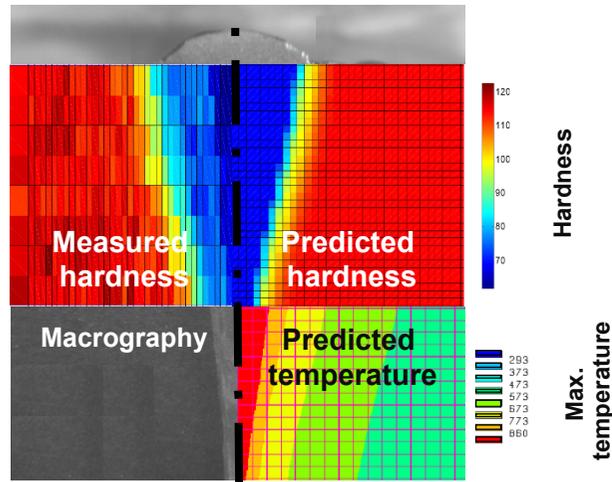

■ MULTIMAP: research topics

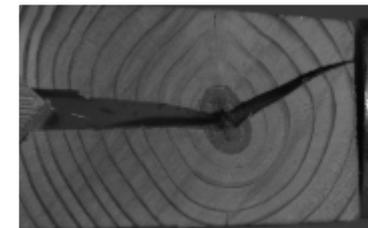

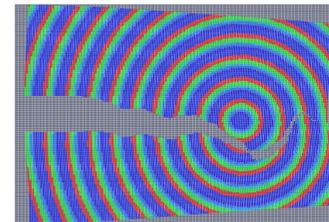

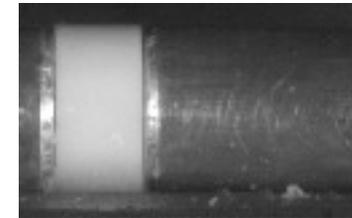

MULTIMAP: some achievements

Processes for metallic materials (welding, peening...) Dynamic behaviour of materials under conditions of shock

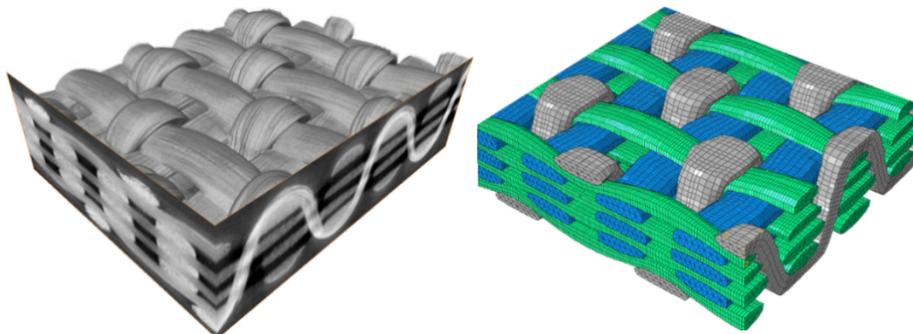

Ex.: prediction of the mechanical properties of a welded part

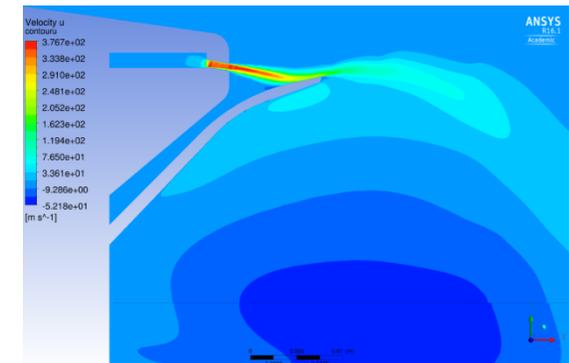

Ex.: dynamic rupture of wood and ice

Composites forming process
Ex: mesh generation from X-ray tomography

Polymer processing
Ex.: simulation of paint projection

SMC : Mechanical Systems and Contacts, P. Velex

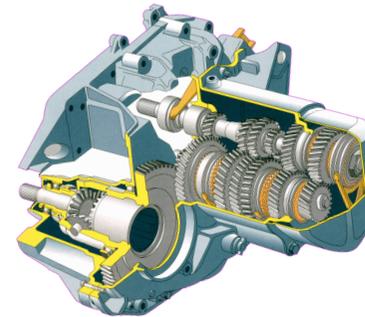

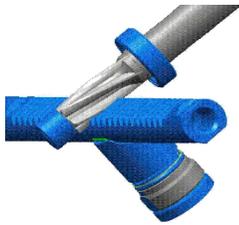

Quasi-static and dynamic functional analysis of lubricated systems

■ SMC Team

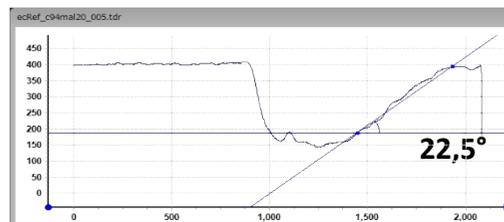

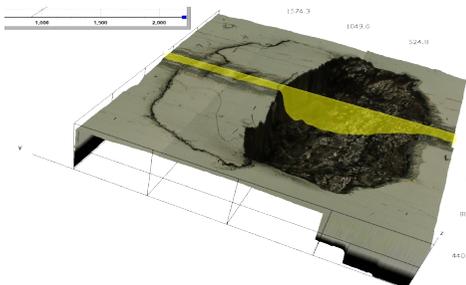

Static and dynamic study of mechanisms (gears, bearings...)

Multi-scale couplings between mechanical systems – contacts

Power losses in mechanical transmissions

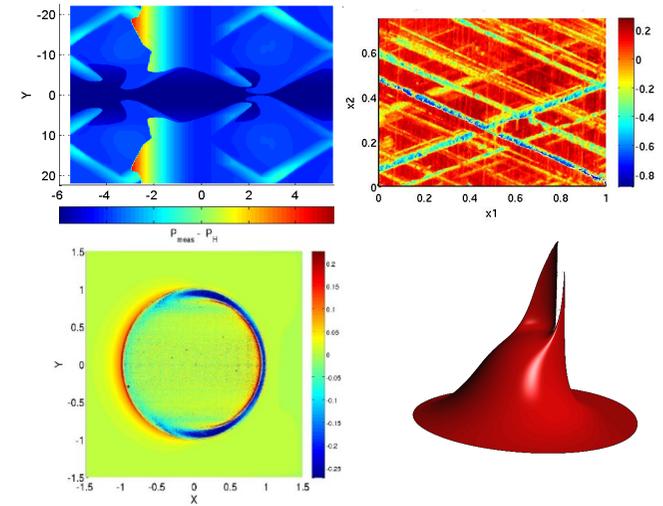

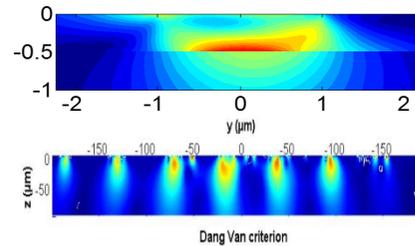

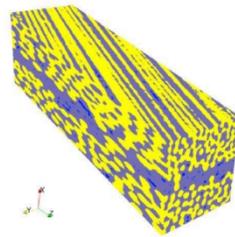

Contact failure analysis

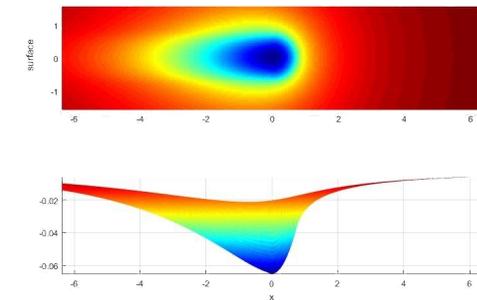

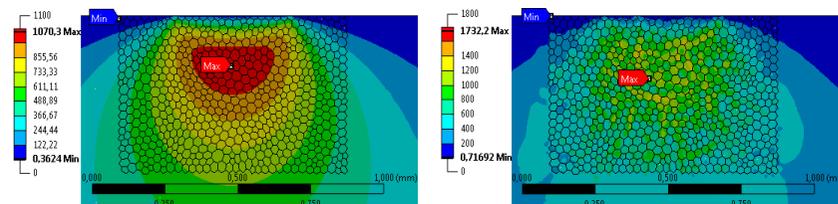

■ SMC Team

Optimisation of engine lubrication (texturing,...)

Numerical simulations of engine part performance (cam, piston rings,...)

Numerical and experimental studies of complex contact performance (heterogeneous materials, adhesion, visco-elasticity, rugosity)

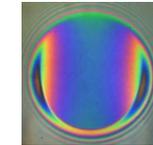

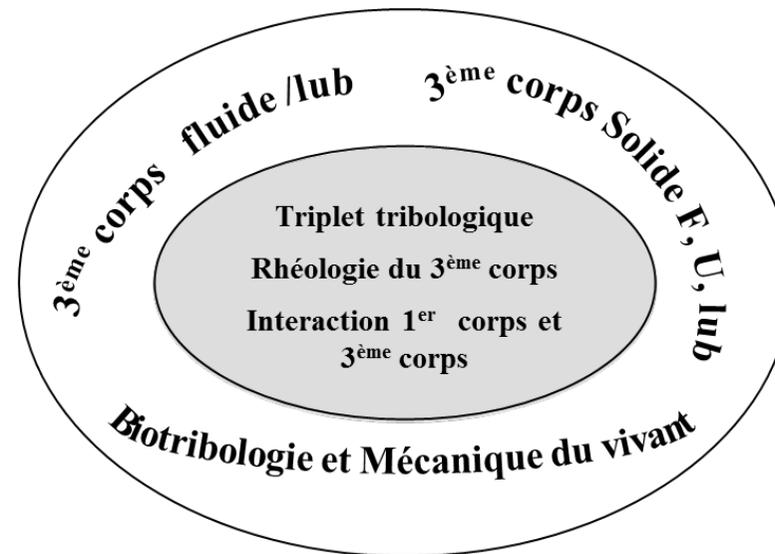

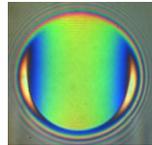

TMI : Tribology and Interface Mechanics, B. Bou-Saïd

Understanding of the tribological behaviour of the contact interface.

Predictive friction, wear and fluid or solid lubrication models

Biotribology and biomechanics

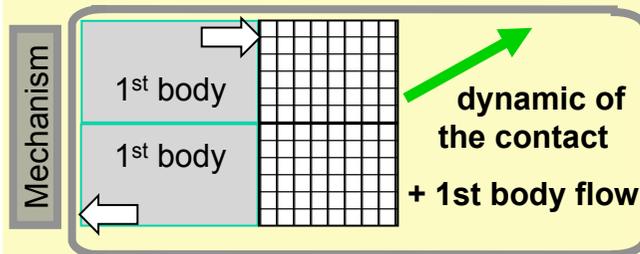

TMI Team

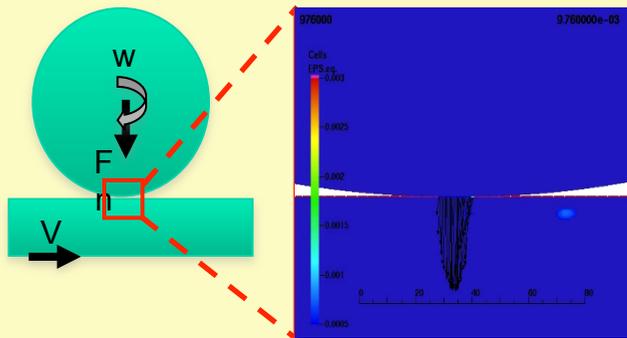

Tribology : **dual experimental-numerical approach**
1st body, 3rd body, mechanism

1st body

Finite element modelling
(EF)

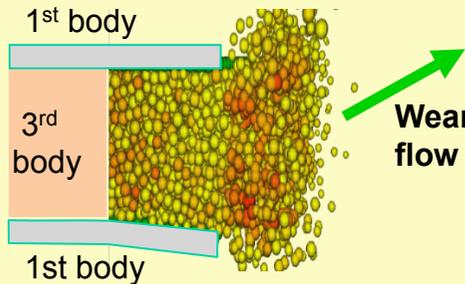

- Wheel-rail contact

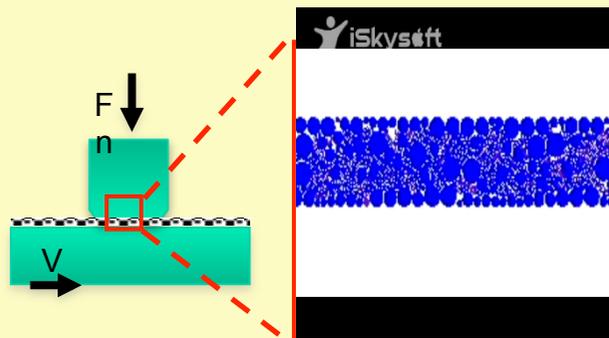

solid 3rd body

Discrete element
modelling (ED)

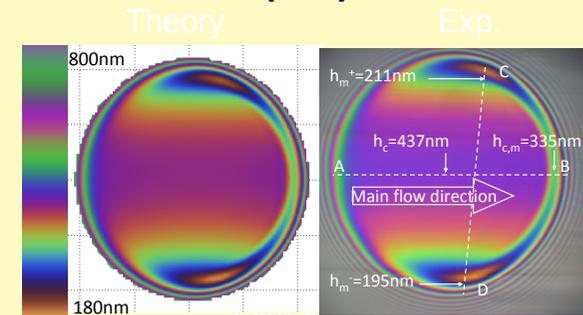

- Energetic materials-

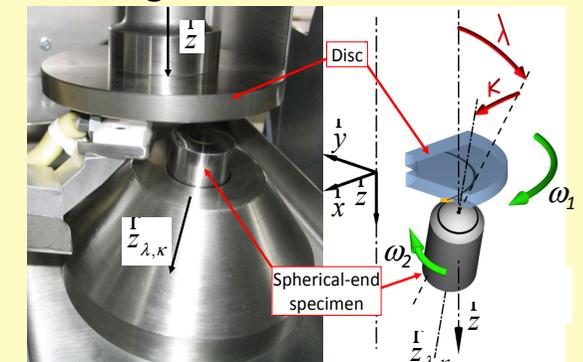

fluid 3rd body

Finite element modelling
(EF)

- Flange-roller end contact

Tribogyr specimen and contact geometry

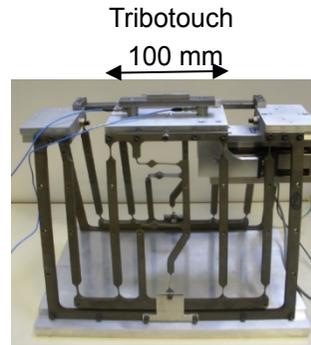

TMI Team

Some experimental devices

Instrumented railway train

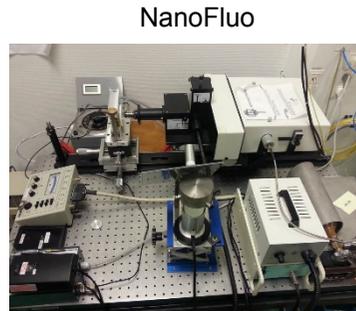

Continuum macro

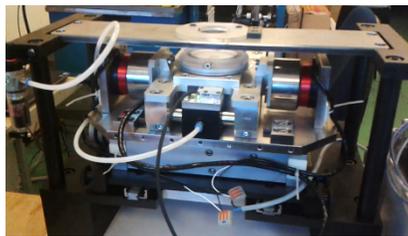

Tribotouch
100 mm

Continuum micro

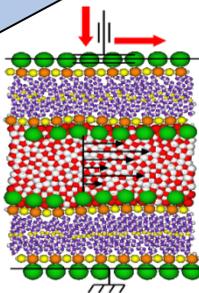

NanoFluo

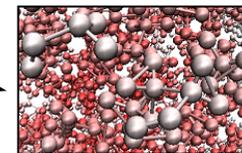

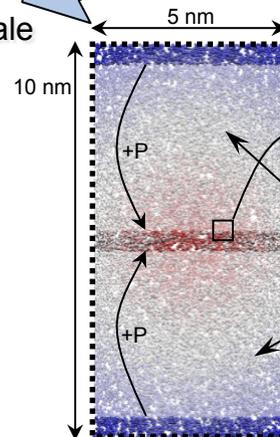

Tribometer + fluorescence
confocal microscope

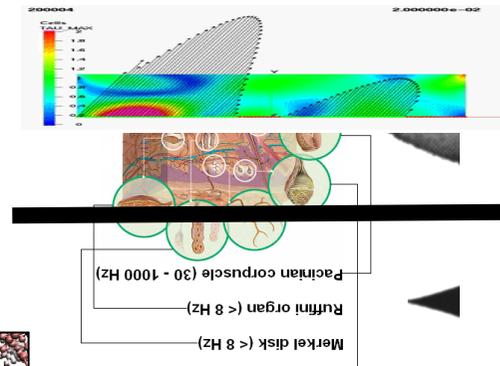

Nano-scale

Nano-scale

Free Molecules

Simulations

■ Keys projects

■ Industrial chairs

- Areva-Safran : Life extension and manufacturing processes
- SKF : Lubricated Interfaces for the Future
- Safran : Innovative mechanical transmissions for aeronautics
- Volvo : Solutions for the Future of Urban Transport
- Michelin : Multi-scale approach and new materials for tire performance

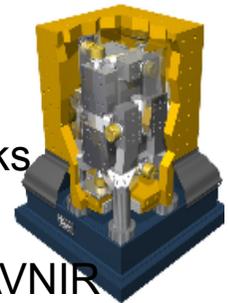

■ Equipex

- Durasol : Durability of solar materials and systems
- Phare : Rotating machines platform to investigate and control environmental risks

■ LabCom

- Drillab (DrillScan) : Geothermal or oil drilling simulation laboratory
- AD VITAM : AVNIR Engineering, Advanced vibrations tests for the analysis of rotating machines
- AD VITAM : AVNIR Engineering, Advanced vibrations tests for the analysis of rotating machines
- Openlab PSA
- TRANSMECA for mechanical transmissions (CETIM)
- CIRTRANS (Renaults trucks, Safran HE, Alstom Transport, GIMA, Texelis, Reel, ECAM, INSA, ECL)

■ Industrial partners and research centers

■ Academic partners

- **Local** : U. Lyon 1, Centrale Lyon/LTDS, INSA/LGEF Ampère Mateis INL, INPG, U. J. Fourier Grenoble, Centre de Plasturgie...
- **France** : CEA, Onera, CETIM, Femto-ST, nombreuses universités (Paris, Le Mans, Compiègne, Strasbourg, Montpellier, Marseille, Toulouse...)
- **Europe** : EPFL, U. Bruxelles, Politechnico Milano, Fraunhofer, DTU Danemark, Imperial College, Trinity College Dublin, U. de Roma la Sapienza...
- **Worldwide** : Georgia Tech, LIGO (MIT), USC Los Angeles, U. Sherbrooke, U. Uberlândia, Tokyo Inst. Of Technology, ...

■ Industrial partners

- **Groups** : Airbus, Airbus Helicopter, Alstom, ArcelorMittal, Areva, CNES, CEA, DCNS, EADS, EDF, Faurecia, GE Global Research, GE Oil& Gas, Herakles, Hutchinson, Maïa-Eolis, Messier-Bugatti-Dowty, NTN-SNR, Decathlon, PSA-Citroen, RATP, Renault, Rhodia Solvay, Robert Bosh Gmbh, Rollex, Safran group, SKF, SNCF, Thalès, Total, Valéo, Volvo,...
- **SME** : Cornilleau, Cornis, Microdb Solystic, Petzl, Vibratec, Tornier, Redex,...
- **Very small enterprises** : Vibrateam...

■ Involvement in the scientific community

■ Editor – Scientific committees – Convention organisation

- Experts in the tribology group of the ASME
- ASME/IGTI, IFToMM Rotordynamics, IFToMM Terminology ISCORMA...
- Conferences ASME IDETC
- International Gear Conference 2014/2018
- Leeds-Lyon Symposium on Tribology
- ESAFORM 2008, JFT 2008, IUTAM 2007, JTM 2007/11/15...
- Review panels : Wear, IJT, IJNME, IJFP,JVC, MI, JMD, JSV

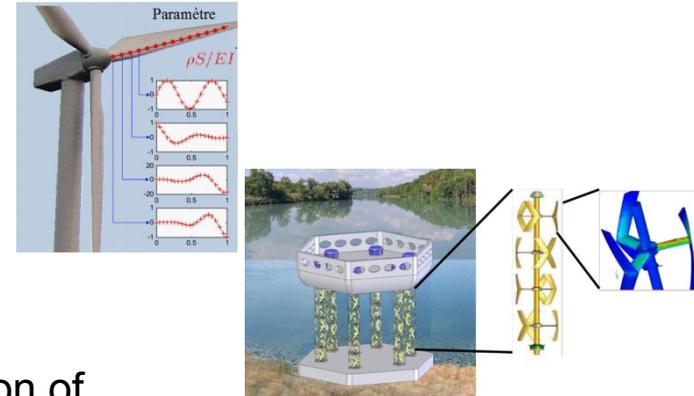

■ Administrative committees

- Several research groups related to impacts, biomechanics, measures, fluid-structure interactions, non_linear dynamics...
- FEDERAMS
- Scientific evaluation committees (SNCF, CEA, SNECMA,etc.)
- National Council of Universities
- French Mechanics Association
- Research and Safety National Institute
- Mechanical Engineering teaching department

Future trends in research

Sustainable development

- Structure weight reduction – Prediction of damage –
- Wear control – Non polluting lubricants – Identification of tribological sources of noise - Energy efficiency

Biomechanics

- Development of technologies for health

Multiphysic modeling

Micro- and nano- Technologies
